

## MRI Brain Scan

Patient Name : Akansha

Date : 2 July 2023

Time : 2:30 PM

Hospital : Sri Balaji Hospital, Delhi

Doctor : Dr. Manas Madan

### Report:

Multiplanar, multisequence MRI of the brain was performed without contrast.

- Cerebral hemispheres show preserved grey-white matter differentiation.
- Hippocampi symmetric, no sclerosis identified.
- No acute infarct, hemorrhage, or mass lesion.
- Ventricular system normal in size and configuration.
- Mild mucosal thickening noted in bilateral maxillary sinuses.
- No abnormal extra-axial fluid collections.

### Impression:

- No MRI evidence of seizure focus or structural abnormality.
- Mild chronic sinusitis incidentally noted.

### Conclusion:

- Normal MRI brain study for seizure evaluation. No focal cortical dysplasia or mesial temporal sclerosis. Recommend clinical correlation with EEG findings for further workup.
