

Abdominal Ultrasound

Patient Name : Akansha

Date : 25 December 2024

Time : 1:30 PM

Hospital : AIIMS, Delhi

Doctor : Dr. Aditya Singh

Report:

Liver is normal in size and echotexture, with no focal lesions. Gallbladder appears mildly distended with uniform wall thickness. A single echogenic focus measuring 0.8 cm noted in the gallbladder lumen with posterior acoustic shadowing. Common bile duct measures 4 mm (within normal limits). Pancreas and kidneys appear normal. No ascites.

Impression:

- Cholelithiasis (gallstone disease) with no sonographic signs of cholecystitis.
- No biliary dilatation.
- Other abdominal organs appear within normal limits.

Conclusion:

- Ultrasound findings are consistent with gallstone disease without complications. Elective surgical evaluation may be considered based on clinical symptoms.
