

## X-Ray Knee Joint

Patient Name : Prakriti Chandra

Date : 29 August 2023

Time : 7:30 PM

Hospital : AIIMS, Delhi

Doctor : Dr. Shobhit Sarkar

### Report:

AP and lateral radiographs of the right knee show maintained bony alignment. Joint spaces appear narrowed at the medial compartment. Osteophyte formation is evident along the tibial margins. No fracture or dislocation. No effusion visible.

### Impression:

- Findings consistent with osteoarthritis of the right knee, predominantly involving the medial compartment.
- No acute fracture or effusion.

### Conclusion:

- Radiographic evidence supports degenerative joint disease. Correlation with clinical severity is advised. Patient may benefit from conservative management; surgical options may be considered if symptoms worsen.
